May 2026

Virtual All-Hands Meeting

May 28, 2026

Agenda

- 1 Staff Updates
- 2 Product & Engineering Updates
- 3 Marketing Updates
- 4 Operations Updates
- 5 Feedback & Q&A

Staff Updates

WELCOME!

Nancy Roberts joins us as
Strategic Customer Success Manager in
Commercial

New Starters

June 1

- Oliver Stenberg Jakobsen, Agentic Software Engineer

June 8

- Axel Rosén-Lidholm, Student Developer

August 3

- Luka Harambasic, Senior Agentic Product Manager
- Derick Snell, Head of Growth & GTM

Open positions

- **Commercial**
Sales Development Representative
- **Operations**
Delivery Manager
- **Engineering**
Product SRE, Agentic QE

Product & Engineering Update

Post-Acceptance 2.0

An Initiative that sees us rebuild the License Management & Author Billing modules for publishers – new code and new design.

Why are we doing this?

Design

Current design does not align with our new Design Principles, or with users' expectations or mental models – confusion can lead to making mistakes.

Errors

Publisher admins need to help authors when there are issues with wrong prices or licenses. This leads to a high stream of incoming bugs to our support team & dev team and has led to revenue loss.

Old code

Built in legacy code means we have limited flexibility to add new features without breaking things – one thing built on top of the other. This limits our ability to keep up with competitive features and innovate.

Active projects in Linear (total= 20)

PA 2.0 Planning

Lead: Dannie

Planning to get us ready as this is first system we build in vertical slice architecture using event modelling. Upskilling team, hosting & deployment, resourcing.

Publishing Options & Licensing: Author workflow MVP

Lead: Christian (CJ)

Event model & delivery of MVP from start of the post-acceptance flow, generate publishing offer, select offer, generate license & sign license.

Product Research & Design

Lead: Romy & Marjorie

Research to validate assumptions around pain points and make sure we build the right product. Internal interviews, interviews with publisher admins, author surveys for recruitment.

ALL PHASES

Discovery: Are we building the right product?

Product & design research

COMPLETED

- Include missing features identified during IEEE & ACS RFP last year
- Feedback from existing customers received in the past
- Problem areas identified by bug ticket analysis
- Support ticket review & classification
- Interviews with internal stakeholders (Customer care, sales, CEO)

IN PROGRESS

- Overview of publisher's direct author tickets
- Mapping of pain points to each workflow for all personas
- Author satisfaction survey (to gauge satisfaction and lead to recruitment survey)
- Author recruitment survey (to recruit for interviews)
- Prototyping of all admin areas required as part of the initiative
- Research interviews with publisher admins — current customers & prospects

SCHEDULED

- Research interviews with authors
- Prototype review with publisher admins
- Prototype testing with authors

Outcomes from discovery will be fed into each step as they are verified and validated.

Sample input from admin interviews

Authors can't go back in the flow

Once you've signed a license, you can't go back – not what authors are used to – creates work for admins.

Block the flow if pending action

Author can proceed with license signature if pending affiliation or license change request – creates unnecessary admin work.

Direct access to relevant articles

Cumbersome workflow to get to articles in a certain status: download report, then go back to platform to search for article.

Revenue forecasting

Competitor gap identified: no easy way to what's pending but not yet ordered to allow revenue forecasting.

"What if authors could haggle live with a chatbot to get an APC discount?"

Product Design

Letter to the Editor in VCOT open
VCOT Open

If you are an author eligible for a prepaid open access publishing waiver or discount based on region or affiliation, you will find it applied and displayed below.

If you think you should be eligible for an **open access agreement**, please make sure the affiliated institution displayed is correct and if not, request a change.

If you have requested an affiliation change, please do **not** proceed to signing the license until you have received a confirmation of the affiliation change from Thieme.

❓ 1. Survey questions

Results

🔗 1.1. Linear scale question REQUIRED

How easy was it to choose a publishing option / license for your article?

Very hardVery easy

3%41

2%22

3%43

10%124

81%945

Mean: 4.64

The process was generally smooth and easy to follow. The licence information was clear after reviewing the agreement. However, at first it was slightly unclear why the checkbox could not be selected before opening the licence document.

I wasn't sure if I was supposed to sign the license agreement or just click the box.

Everything worked smoothly; the only issue was that although I selected my affiliation as 'Universiti Utara Malaysia,' the system automatically displayed it as 'Northern University of Malaysia.'

Loading was painfully slow.

Your system is getting more and more cumbersome and time consuming just from submission to publication.

ACS Journal Launches

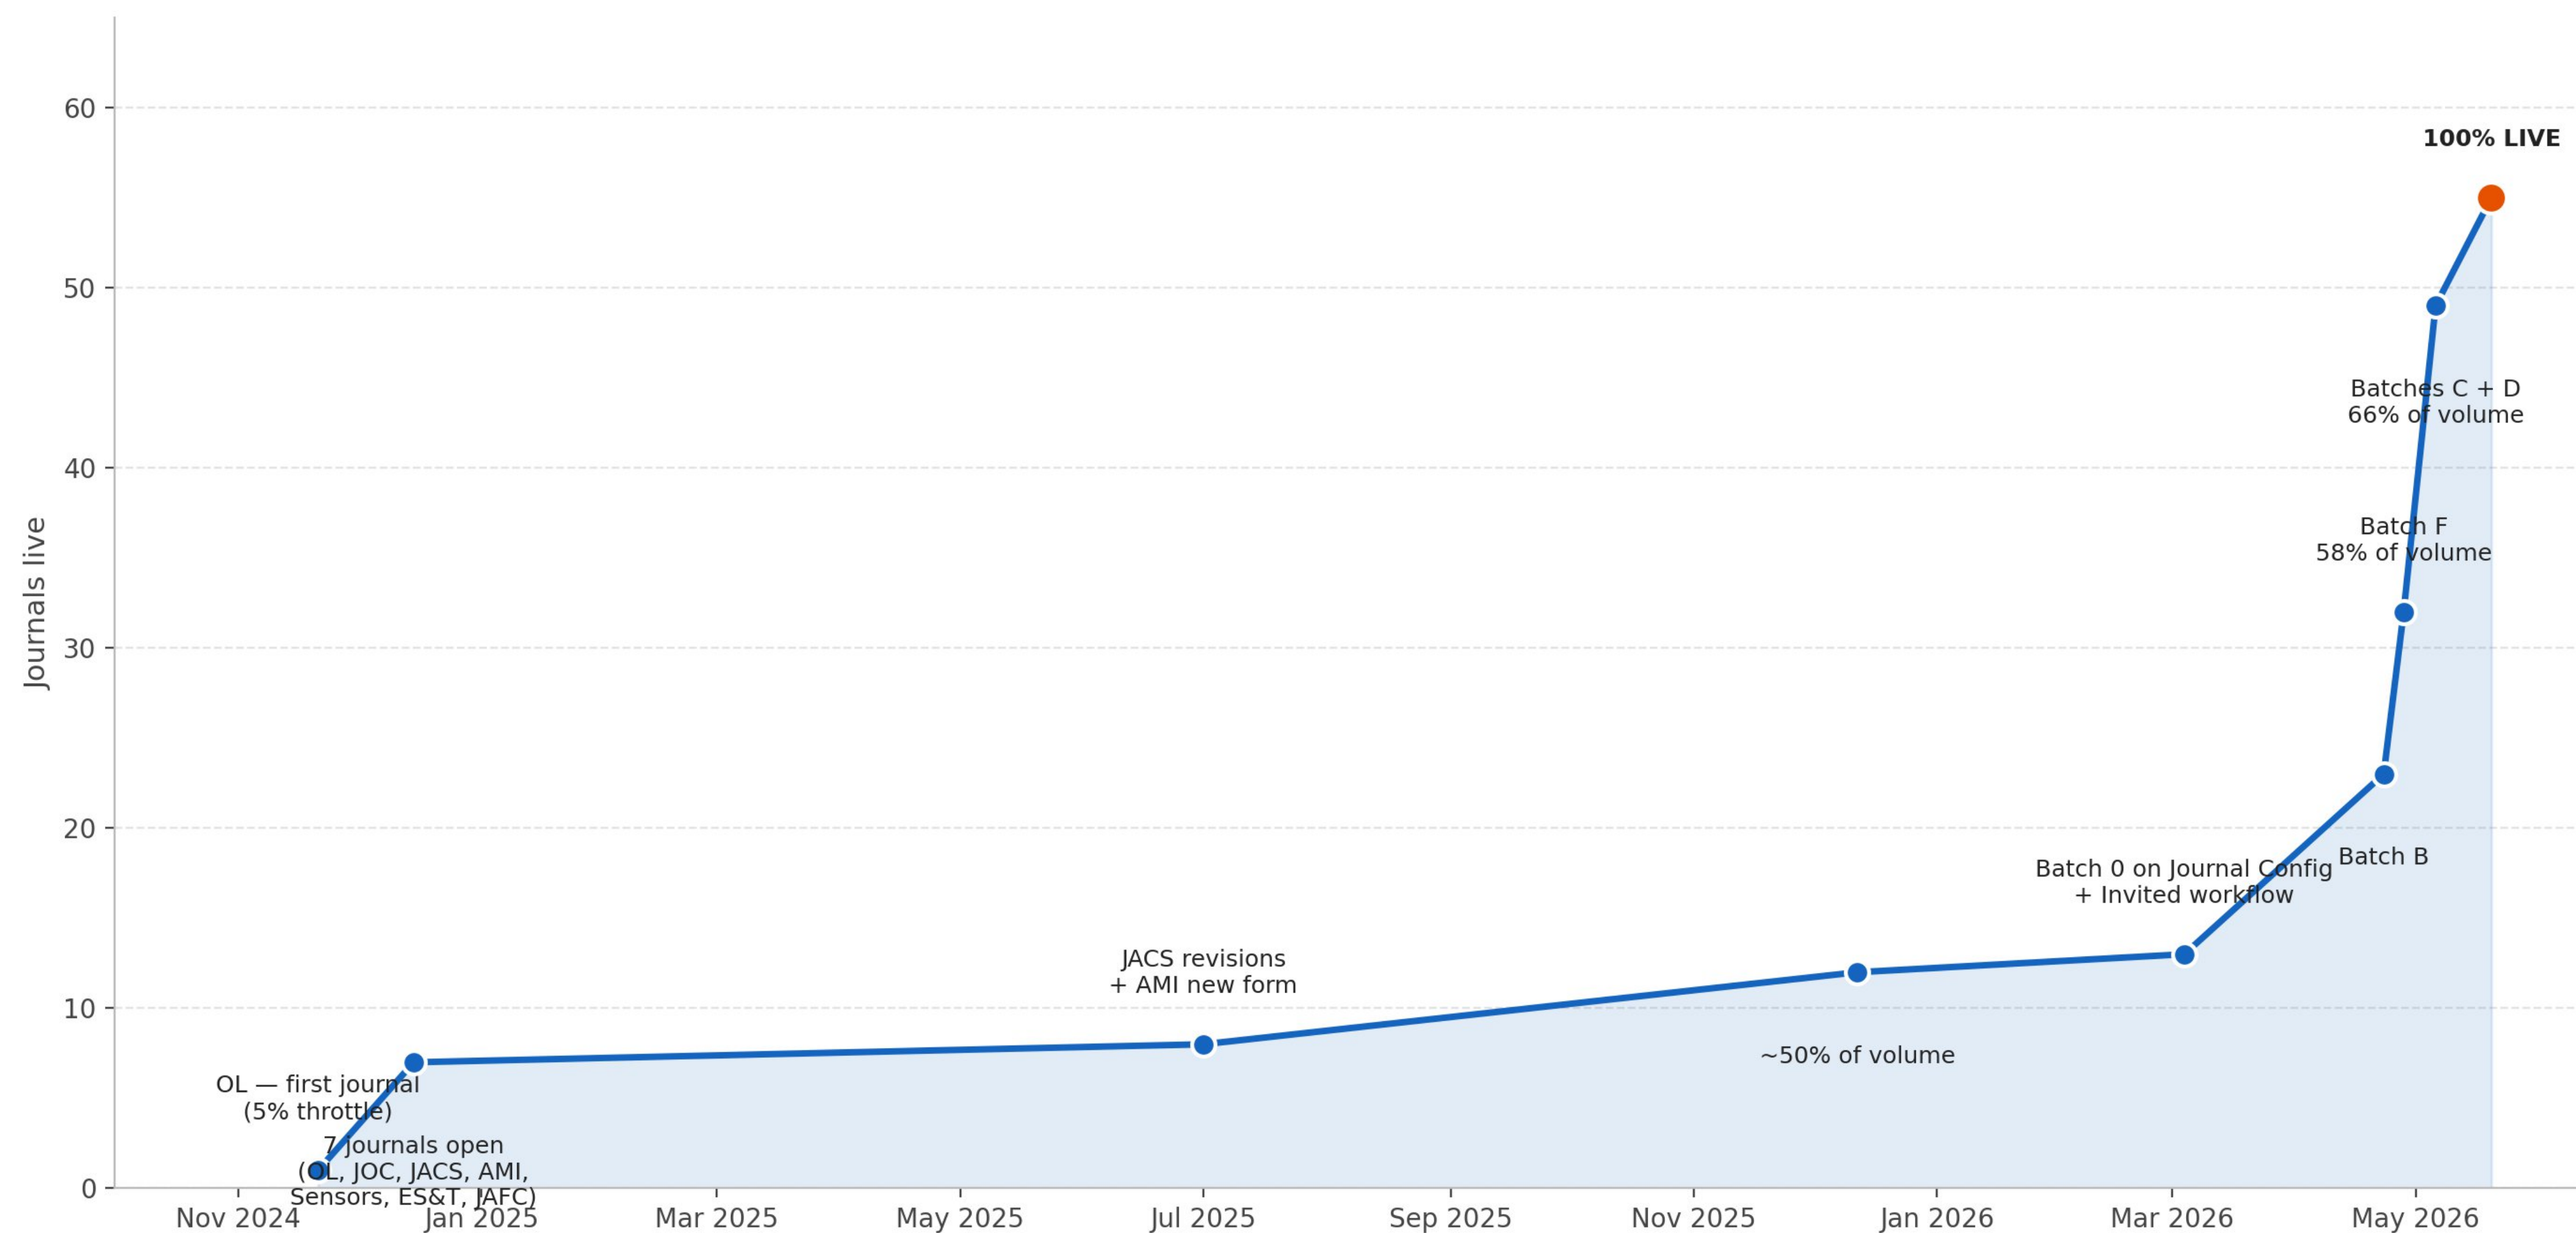

*Last week we went live with 100% of ACS journals.
This marks a huge milestone in the ACS/CH
relationship and, for some of us, an end of one phase
of an ambitious goal we started in July 2024!*

Timeline

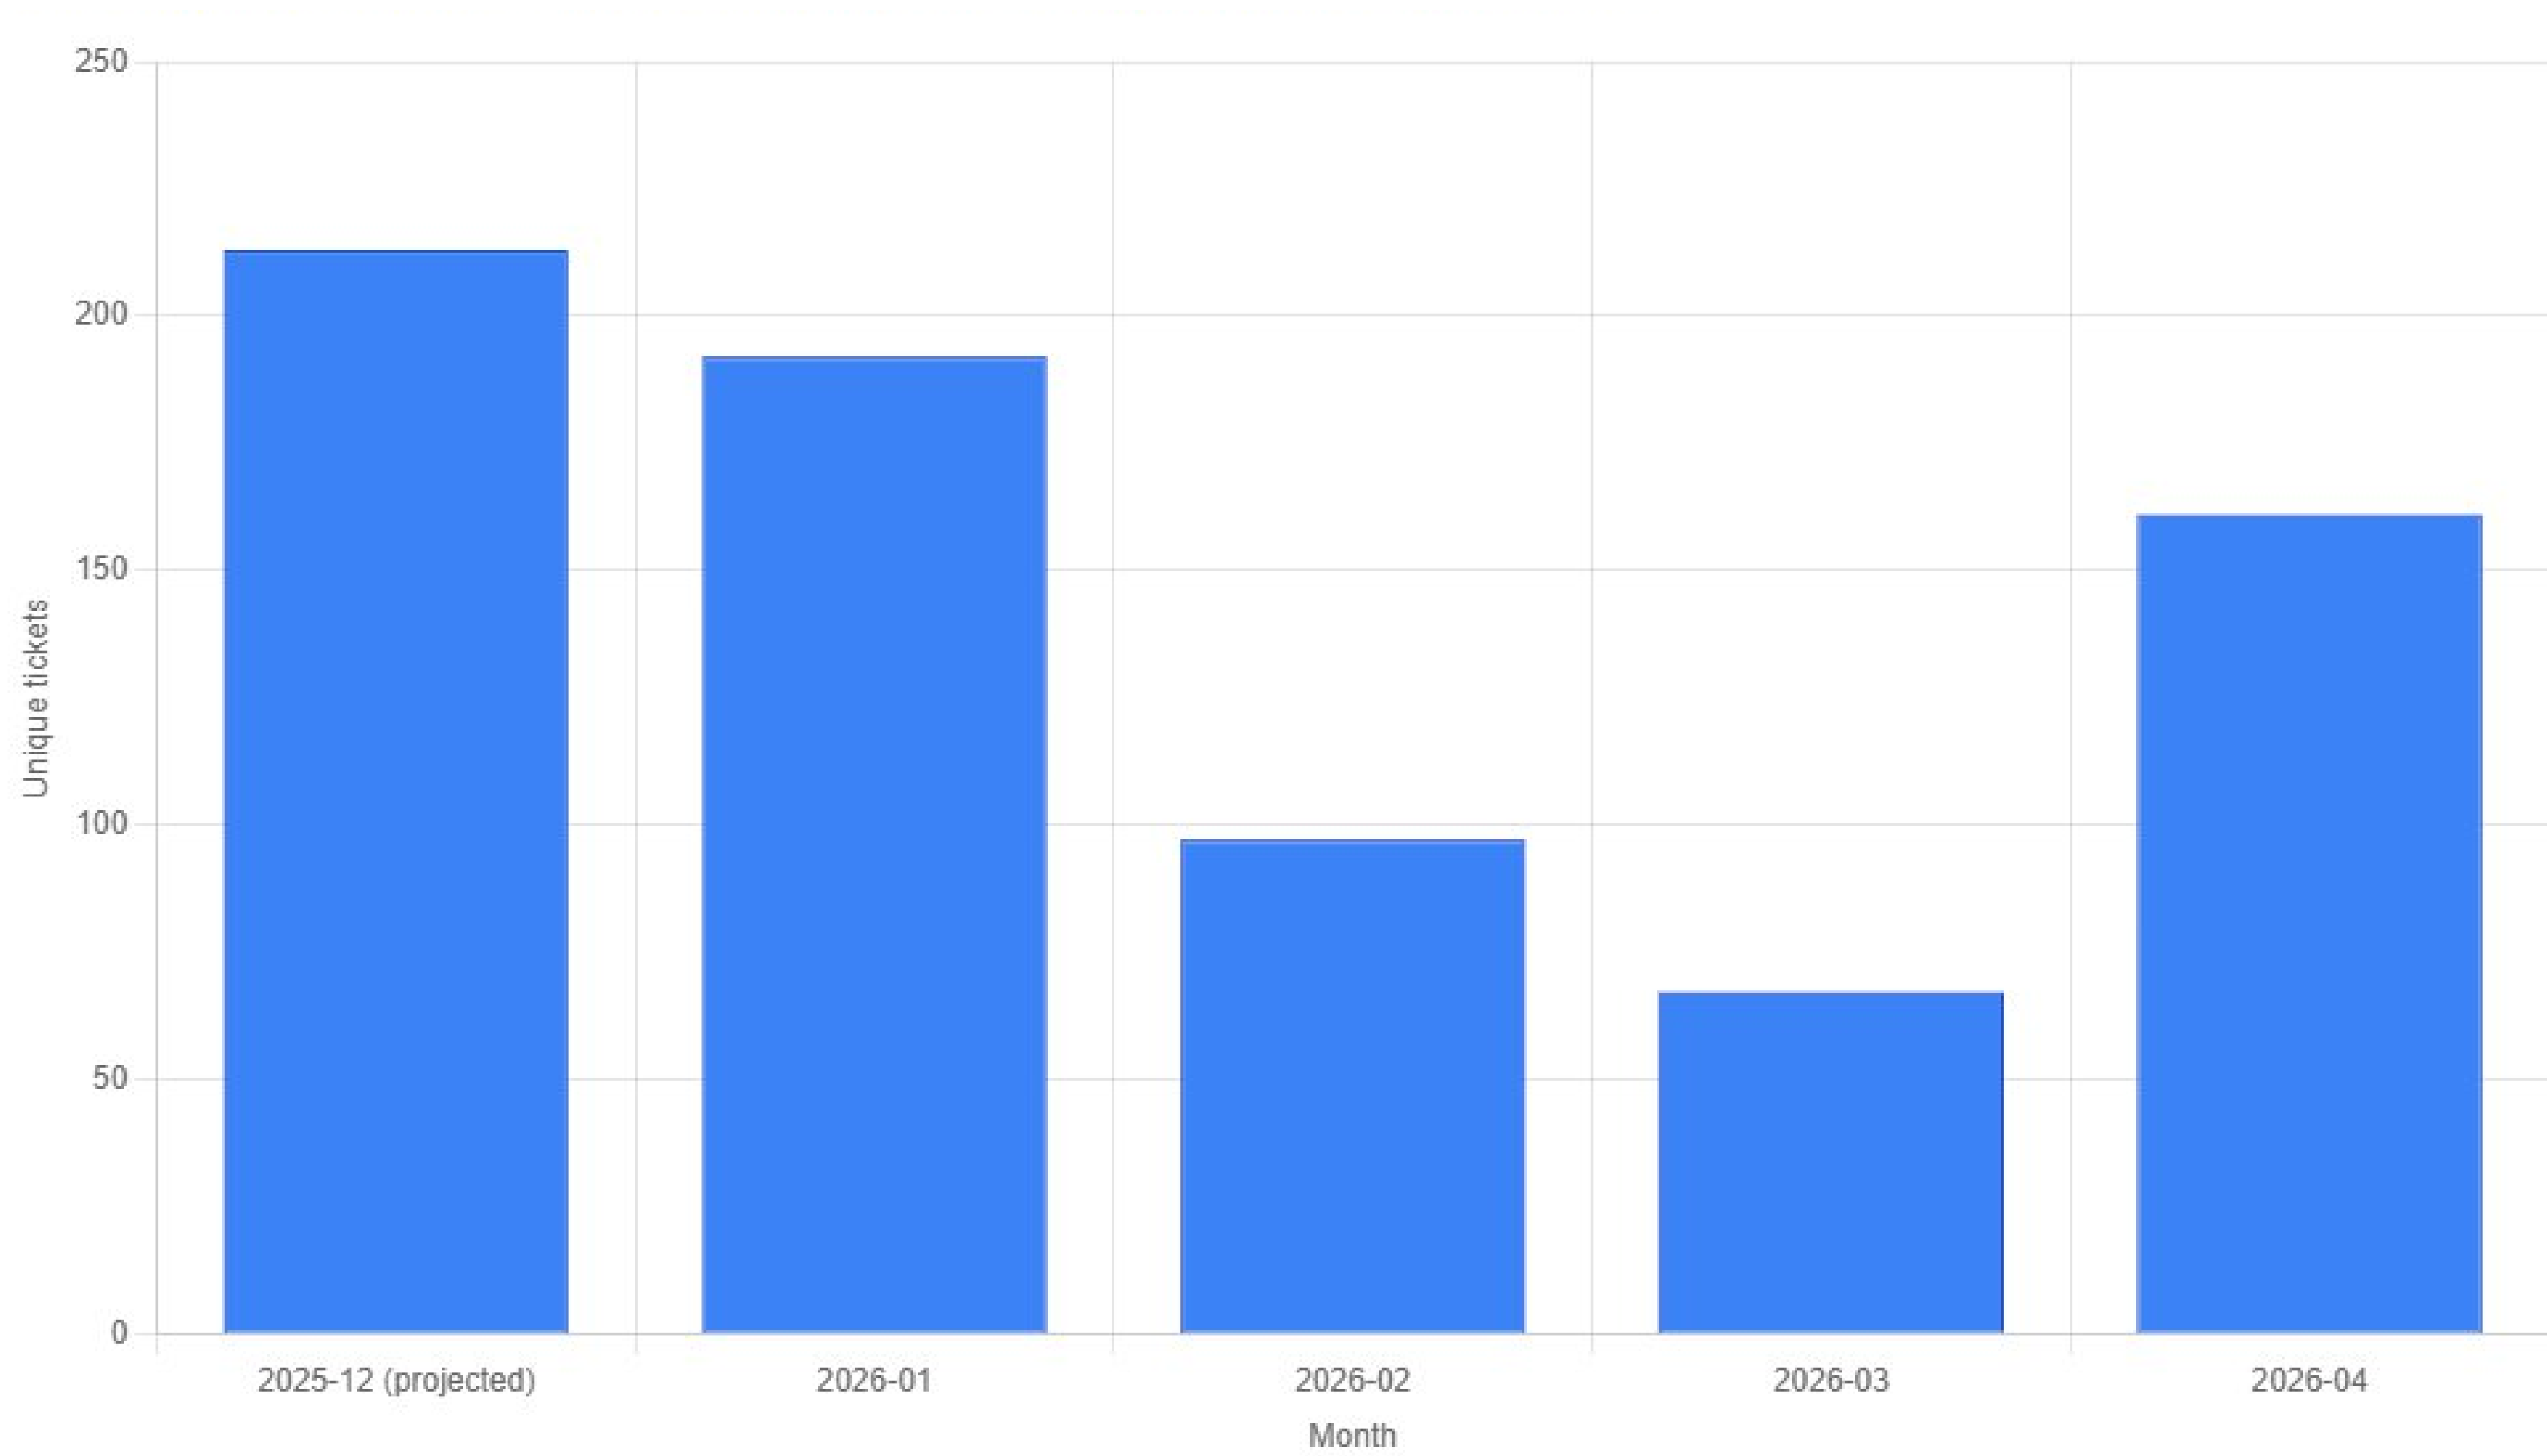

Timeline – Number of Journals on CH

Timeline – Incoming support

Just how FAST are
we going?

Fluid Adaptive Scaling Technology – revisited

The FAST and the Furious

Are we doing it?

Yes! We had our first FAST meeting on April 27 and never looked back.

Are we doing well?

We are. Still in a transition period with a lot of constraints and process legacy, but we are experiencing good results.

Are we done yet?

No. It will take an ongoing effort to improve and adjust the processes to work best for us.

From SCRUM to FAST

Three Teams > One Collective

One Product & Engineering team working together to solve the most important things for the business.

Team Boards > Marketplace

One single overview of work in progress and most important and tasks projects pending.

Sprints > Value Cycles

Repeating two-day cycles, each starting with a collective FAST meeting.

The FAST Meeting

1. Synchronize

- Close the previous value cycle
- Share learnings and progress

2. Open New Value Cycle

- HoP presents roadmap and Marketplace updates
- PMs, EMs and Champions provide details on individual items

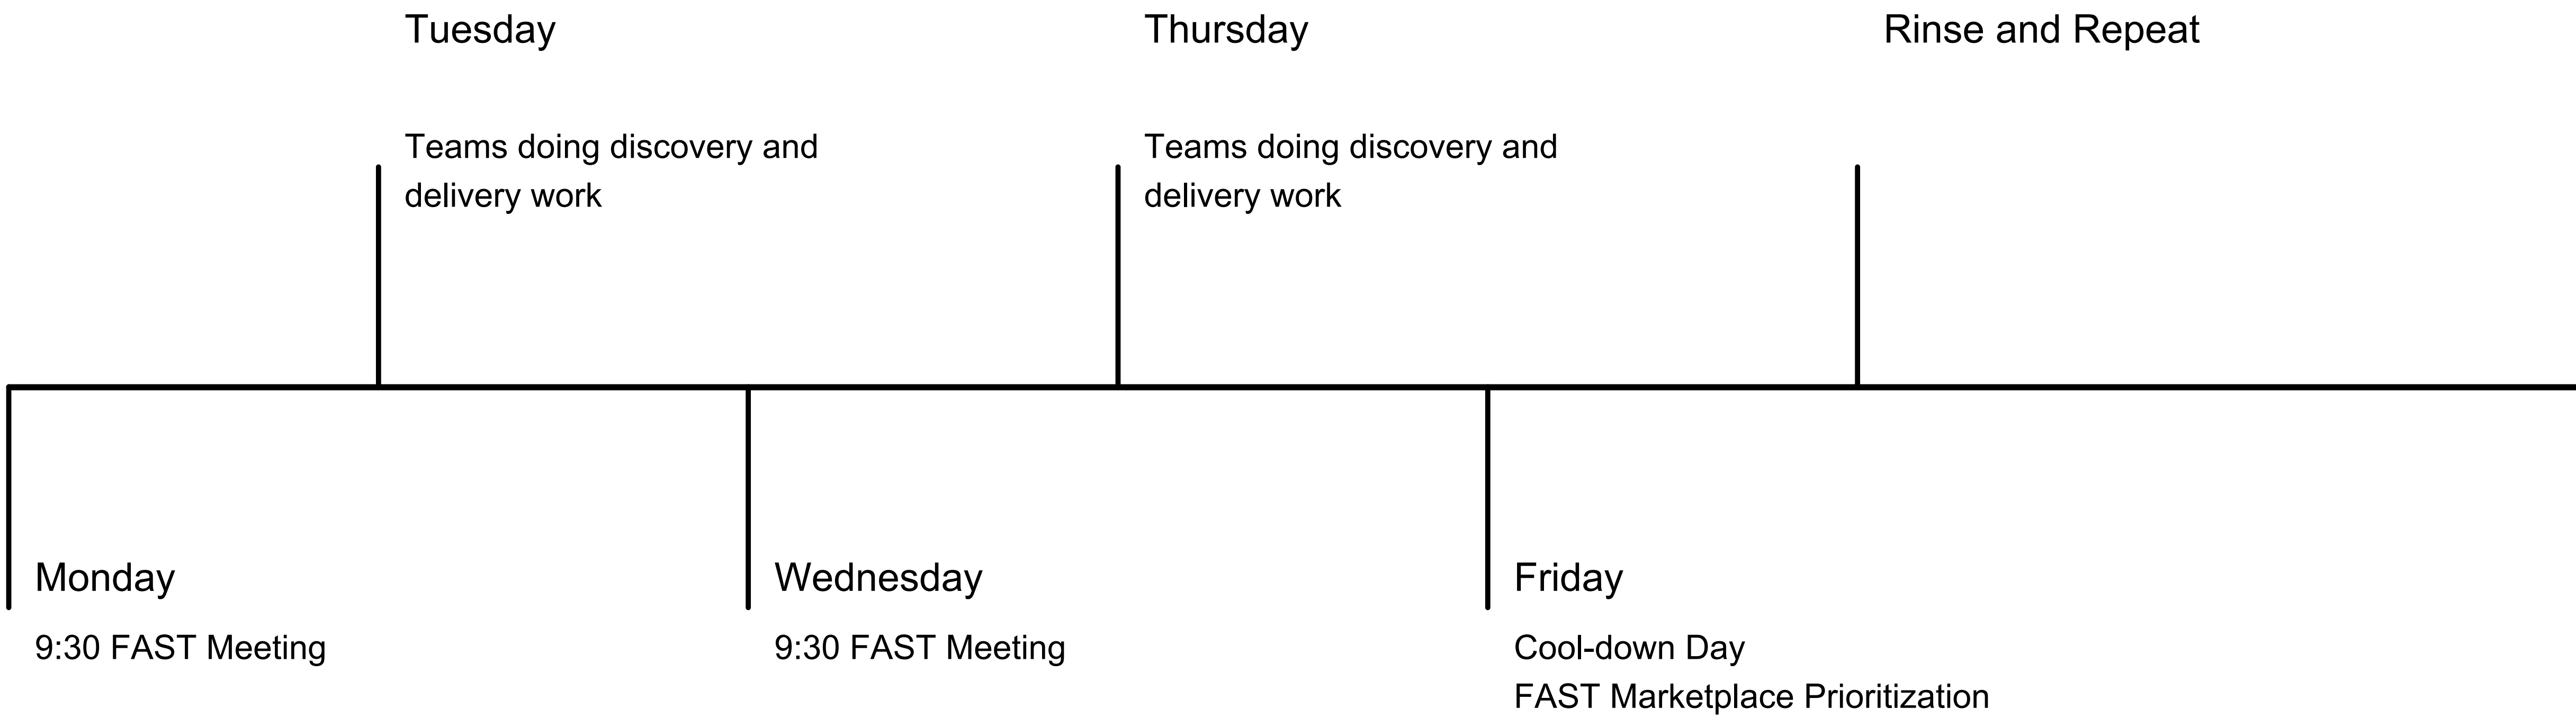

3. Form Teams Around Work

- Teams are assembled around the highest-priority items on the Marketplace

4. Plan Work in Teams

- Break down tasks
- Resolve dependencies

The FAST Schedule

Introducing FAST — The Past and the Future

We've historically needed fluid collaboration. Our future — product over projects and agentic product engineering — demands it. Yesterday we took the first step.

Staff Liquidity

- One collective — mobility across bounded contexts
- Form the right team for each task, every time
- Natural collaboration focused on the work at hand

Transparency

- One big picture via the Tree — not scattered boards
- Collectively shared product and vision insights
- Built-in knowledge-sharing, demos, and updates

Agility

- Adjust focus when needed, not when scheduled
- Refinement driven by continuous discovery, not ceremony
- Deliver the most important things — not all the things

Empowerment

- Less push, more pull — the ChronosHub hivemind
- Fewer bottlenecks, fewer handoffs — exploit the constraint
- We're in this together — let's work together!

Current FAST Trends

Staff Liquidity & Empowerment

Opting in to tasks where you can contribute

Transparency

Learning about all initiatives in progress

Agility

Adjusting to reality in every FAST meeting

FrontierHub update

FrontierHub

What is FrontierHub?

It is ChronosHub's cross-functional AI working group, inspired by the Frontier Firm concept from Microsoft & Harvard D³.

What are the goals?

- Give every department a shared foundation in how to work with AI
- Help teams identify the use cases that can be automated
- Surface AI wins, blockers, and opportunities that no single team would tackle alone

What have we been doing?

The sessions so far are the groundwork everything else depends on: every member now starts from the same foundation. We have covered the Claude products, MCPs, skills, picking the right model, and Obsidian.

What's next

The shared baseline is now in place. The goals for the next period:

- Identify use cases that can be automated or improved with AI
- Run experiments in each department, starting small
- Expand AI knowledge and fluency across departments
- Share what works (and what doesn't) across teams

Marketing Updates

Campaign recap

Overall goal of activity is **to spread awareness of the ChronosHub Publisher** product through Case Story done with Emerald Publishing

To make sure we both reach broadly with the campaign, but also getting the message across, we will divide the activity into two:

- **Video driven** activity where the goal is the get target group to consume video content, and become aware of our products through Tony’s presentation
- **Website traffic** driven activity where will entice people to visit the case story page and watch full video and read content there

Target Group

Top 33 Publishers working within research, administration, business development, education, IT, marketing, Project Management, Operations, Media & Communication, Product Management, Quality Insurance, Sales and Customer Service = 44.000 people

Media overview

Media	Budget
LinkedIn	20.000 kr.
Thought Leadership Ad	8.000 kr.
Traffic Ads	5.500 kr.
Video View Ads (Mixed lengths)	6.500 kr.
META	1.000 kr.
Traffic Ads	600 kr.
Video View Ads (Mixed lengths)	400 kr.
Youtube	1.000 kr.
TrueView Ads (Full video)	1.000 kr.
Total	22.000 kr.

Equity isn't just about who can read research. It's about who gets to publish it. Emerald Publishing wanted every author, anywhere in the world, to have that chance. ChronosHub helped make it real. See how Emerald built a simpler, more inclusive author experience.

Open-access routes. Article processing charges. Compliance requirements. Authors shouldn't have to navigate all of that alone. Emerald didn't replace their systems. They connected them. Now authors go from manuscript acceptance to signed license and payment in minutes. Here's how they did it.

Operations Updates

Prepping for Q2 Board Meeting

To be held on the afternoon of June 11th (in Copenhagen 🌴)

2026 Budget Reforecast and 2027 Proposed Budget

To be discussed & refined at the Board Meeting

Product Workshops w/ IEEE & ACS June 8-10

Partnering with Product & Engineering to plan 3-day workshop

All Company Session June 11-12

With all of you fabulous people

Wrap up Ways of Working initiatives

Targeting completion by end of Q2

What is operations up to?

Feedback & Q&A

Feedback on All-Hands format

"I think the current form works really well and keeps everyone engaged."

"More engagement from participants, even if it is through polls or chat."

Feedback on All-Hands format

“A brief highlight of industry news stories to follow.”

journal•ology

hum

Question for the team: How do you want to see and interact with industry news?

Q&A

Q:

Monthly update on financial performance, update on sales pipeline, feedback from customers and users
More about what is in the pipeline, and what customers have been saying about us.

A:

Financial performance will be a regular part of the All-Hands going forward (nothing this month since numbers haven't changed since the May 12 presentation).

Updates on pipeline and customer feedback coming up at next month's All-Hands – Commercial is currently at SSP getting some more pipeline in! :)

Q:

How CS is doing?

Welcome to Customer Success!

Customer Journey

Working with customers across the full lifecycle: onboarding, adoption, retention, expansion, and **advocacy**.

Trusted Advisors

We aim to become trusted advisors to our customers.

What you can you expect

We are just getting started. Expect to hear more about: customer surveys, customer health scores, CS playbook, customer segmentation, and more.

Team effort

We will be working with all of you to make Customer Success, a success!

Q&A

Q:

What are Frontier Hub working on?

A:

Covered by Alex in previous section.

Q:

Do we have an AI strategy which spans the whole business not just engineering? Are there tangible examples tech can show us of 'manual' versus AI supported coding? What difference does AI makes in terms of speed and quality? As a none techy a lot of what is spoken about is theoretical so seeing something real would be very interesting.

A:

First part covered by Alex in previous section. For second part, Dannie will share more at next month's All-Hands.

Q&A

Q:

As we become an AI-forward company, has there been any consideration of the environmental impact? Maybe there are resources/tools which can help us schedule tasks for less energy-intensive times, identify data centers which use sustainable energy etc. Could also be a nice message to be putting out into the market, that we're trying to be responsible in our use.

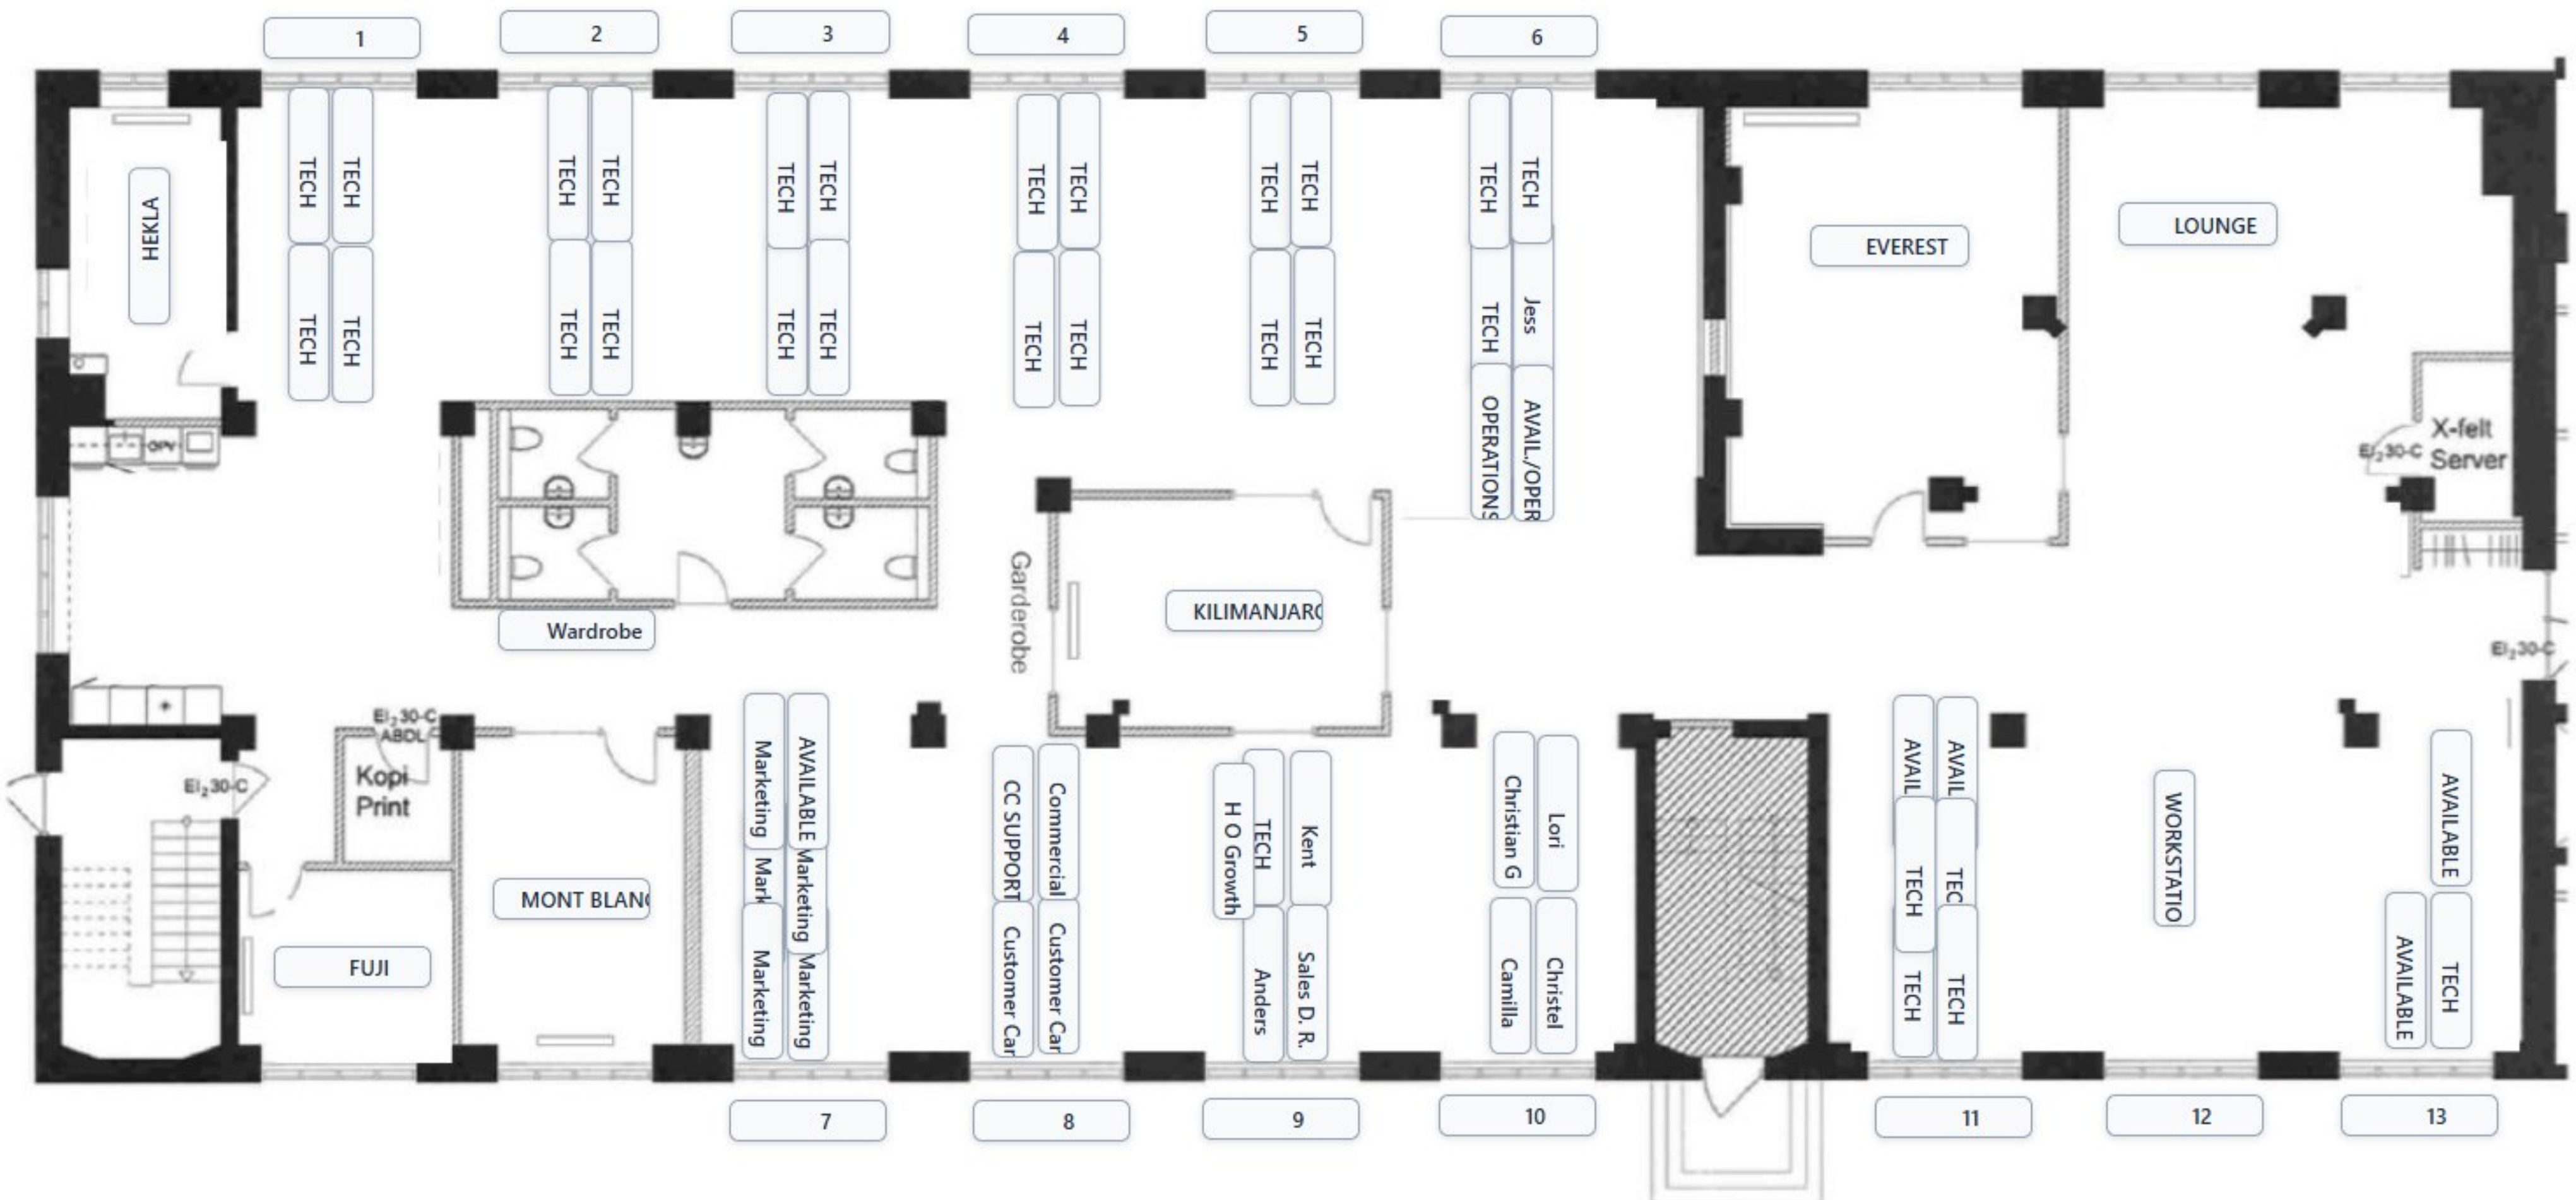

A:

Short & honest answer: we're aware of it but haven't made any plans yet. AI governance is something we're starting to look at.

Q&A – new seating plan

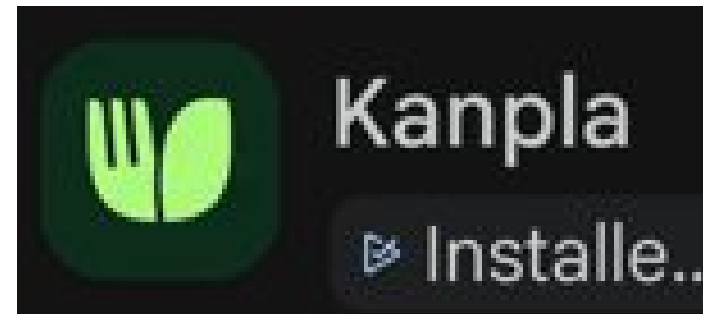

Q: Seating changes, timeline and impact on teams

A: We are still growing, which means that we need to re-arrange at bit and start using the front room as well.

Q&A – new lunch app from 1. June 2026

Everyone should have received an email with instructions on how to activate your new account on the new lunch app "Kanpla".

Follow the instructions in the email.

Accept your invitation. Skip the section titled “*extra access*”.

- Download the **Kanpla** app and log in.
- From **Monday, 1 June**, use the app to order your lunch as before.

Q&A

How is Kristin doing?

Thank you!

ChronosHub
